FLOW PROPERTIES OF HARD PVC. [1963] 6p.
(figs. omitted) 10 reinf.
Order from SLA \$1.10

63-14167

Partial trans. of Kunststoffe (West Germany) 1960,
v. 50, no. 3, p. 163-165.

DESCRIPTION: "Polyvinyl chloride, Creep, Viscosity,
Fused materials, Lubricants, Additives.

Numerous hard PVC mixtures were studied with the aid
of a melt-viscosity testing apparatus which has been
useful with other plastics. After a few changes in the
apparatus, this equipment made it possible to obtain in
simple fashion a meaningful reference number for the
flow properties of such mixtures. Effects of the
various kinds of PVC, as well as that of lubricant and
stabilizer additives, on workability, can be measured
in this way in laboratory tests. (Author)

I. Piatonov, M. S.
II. Title: Dehydrogenation...

Trans. of Zhurnal Obshchel Khimii (USSR) 1941 [v. 11]
p. 683-685.

DESCRIPTORS: *Alcohols, Dehydrogenation, *Rhenium
compounds, *Sulfides, Catalysis

Rhenium disulfide is an excellent catalyst for dehydrogenation of alcohols. It gives high yields of formaldehyde, acetaldehyde and acetone when the corresponding alcohols are passed once over a small layer of this catalyst. Side reactions (dehydration, decomposition of aldehydes or acetone) are almost absent. The exit gases contain very little carbon monoxide and unsaturated hydrocarbons. Rhenium disulfide is apparently not very suitable for catalytic hydrogenation of carbon (Chemistry--Organic, TT, v. 6, no. 7) (over)
